

SECURITY STARTER

**KYBER
SECURITY**

 www.kybersecure.com

LOOKING TO PROTECT YOUR ORGANIZATION BUT ARE UNSURE WHERE TO START? THE SECURITY STARTER WILL HELP YOU MAKE THE TRANSITION.

Individually, smaller organizations might not be worth billions, but as a whole their data is worth so much more. Cyber criminals target small and medium sized organizations because they are typically much less prepared than larger enterprises and therefore easier to penetrate. To protect your own organization as well as your clients, the best solution is to invest in a cybersecurity program.

The Security Starter will help you take the first steps towards a full layered cybersecurity program. We know there could be push back and reluctance to invest in an unfamiliar world. This program is a valuable stepping stone that can ease cybersecurity into your company culture. The Starter will help you establish the best path to protect your organization to easily make the transition into a full layered defense-in-depth security program.

THE SECURITY STARTER INCLUDES:

Dark Web Monitoring

Weekly End User Awareness Tips

Employee Cyber Awareness Training

Employee Social Engineering

Annual Security Review

THE SECURITY STARTER IS A BUILDING BLOCK TOWARDS A FULL DEFENSE-IN-DEPTH LAYERED CYBERSECURITY PROGRAM

PROGRAM DETAILS:

End users are one of the largest potential breach points in your network but they can also be your greatest defense. These combined services are laser focused on establishing an every-day cybersecurity culture with your end users.

Regular **cybersecurity employee awareness training and tips** will help your staff become more aware of risks and therefore be more proactive in preventing them from happening. Our **employee social engineering** exercise will put your end users to the test and assess how well your team absorbed the training to ensure they remain vigilant. In the case of human error slipping through the cracks, **real-time monitoring of the Dark Web** will limit the damage compromised credentials can pose to your business.

The **annual security review** will help us tie the whole program together. It will allow us to take a bird's eye view of your security posture annually, so we can ensure that your organization has all the information necessary to be KyberSecure™.
